Education

The University of Texas at Dallas **Dallas, TX**

Bachelor of Science in Computer Science, GPA: 3.783 (Cum Laude) *May 2025*

Certifications: AWS Certified Solutions Architect, MCP Advanced Topics - Anthropic

Technical Skills

Languages: Java, Python, JavaScript/TypeScript, C#

Frameworks & Tools: React.js, Node.js, Express.js, Spring Boot, .NET, Git, Splunk, Docker, Postman

Data: MySQL, PostgreSQL, Oracle SQL, MongoDB, Prisma, Pandas, Plotly, Kafka

Cloud: Terraform, Lambda, S3, API Gateway, CloudFront, SAM, EventBridge, Bedrock, Step Functions, DynamoDB

AI: RAG, MCP, Agentic Systems, Multi-Agent Orchestration, LangChain, OpenAI API, Anthropic API, Claude Code

Experience

Hagerty **Dallas, TX**

Software Engineer - Cloud Platforms *April 2026 - Present*

- Owned architecture and delivery for Node.js **event-driven, serverless systems** supporting **$32M+ ARR across 150+** state and local government entities as the **sole full-time engineer** on the onboarding project.
- **Modernized** legacy onboarding application, migrating undocumented standalone Lambdas into standardized production framework using **AWS SAM IaC under 4 weeks**.
- Cut execution time by **44s per run** by consolidating **20+ fragmented services to 11 optimized functions**, eliminating a legacy "Lambda Pinball" monolith via a **shared Lambda Layer** with **in-memory caching**.
- Orchestrated parallel workflows across **Paylocity, Microsoft, and enterprise SaaS** platforms using **AWS Step Functions** and **EventBridge**, slashing onboarding runtime from **5m to 1m** with built-in **2-click failure handling**.
- Engineered a **zero-trust CI/CD pipeline** via GitHub Actions and AWS SAM, utilizing Jest suite covering **190+** unit and integration test paths with **85.14%** test coverage to achieve strict environment parity (Dev/Staging/Prod).
- Partnered with **executive leadership** to architect a secure serverless SFTP solution for **New York City Emergency Management**, building an **AWS prototype** to eliminate critical security vulnerabilities.

Paycom **Dallas, TX**

Software Developer *June 2025 - February 2026*

- Developed full-stack features for **$40M+** background check and WOTC platforms serving **small businesses to F500** clients, resolving production incidents within **12-hour SLAs** across **sharded MySQL**.
- Reduced worst-case latency of PHP/React monolith by **90% (29s to 3s)** by eliminating N+1 queries, refactoring XML, and implementing caching resulting in improved throughput for handling **5,000+ daily webhook** requests.
- Delivered "Remote Work Location" feature from **concept to production in under 2 weeks**, reducing client setup time by **3 minutes per background check**.
- Developed custom CLI tools for environment syncing & debugging, saving **dozens of engineering hours weekly**.

Tyler Technologies **Dallas, TX**

Software Engineering Intern - UTDesign *August 2024 - December 2024*

- **Led team of 5** building **Java Spring Boot** CMS with PostgreSQL, cutting newsletter time from **3 days to 3 hours**.

Projects

Agentic EMS Platform *July 2026*

- Built **serverless platform** processing unstructured EMS logs via **Bedrock** for automated claims execution.
- Architected **multi-agent state machine** executing 2-round **negotiation loops** with **deterministic HITL** escalation.
- Deployed event-driven AWS SAM stack (API Gateway, Lambda, Step Functions, DynamoDB) via **GitHub Actions** with **OIDC auth**.
- Orchestrated **4 concurrent** Claude Code agents in isolated worktrees to build, test, and ship vertical system slices.

AI-Powered SDR Lead Generation System *March 2026*

- Built a **RAG-based agentic system** in Node.js with HITL authorization, automating real-time prospect research and direct email execution to reduce daily SDR workload from **2 hours to seconds**.
- Designed and implemented a **custom MCP server** with **Google Serper API tool** integration to fetch up-to-date company news, powering context-aware outreach via **OpenAI and Anthropic APIs** through **LangChain**.
