Education

The University of Texas at Dallas **Dallas, TX**

Bachelors of Science in Computer Science, GPA: 3.783 (Cum Laude) *May 2025*

Technical Skills

Languages: Java, C#, Python, PHP, C++, JavaScript, HTML/CSS

Frameworks & Tools: React.js, Node.js, Express.js, Spring Boot, Git, Splunk, Docker, Visual Studio, Jira, Postman

Data: MySQL, PostgreSQL, MongoDB, Prisma, Pandas, Plotly, Kafka

Cloud & Certifications: AWS Certified Solutions Architect, AWS Certified Cloud Practitioner

Experience

Paycom **Dallas, TX**

Software Developer *June 2025 - February 2026*

- Developed and maintained large-scale background check and tax credit platforms serving clients from **small businesses to Fortune 500** companies, powering a **$40M+** product that saves **$10M+** annually in federal taxes.
- Built and supported full-stack features across a **PHP MVC** monolith and **React SPA**, designing **REST APIs** and webhook handlers for **event-driven** integrations, and shipping changes through **CI/CD** pipelines while resolving production incidents under **12-hour SLAs** across **sharded MySQL**.
- Reduced worst-case latency **90% (29s → <3s)** for a high-traffic **third-party callback** by eliminating N+1 queries, refactoring XML parsing, and caching hot paths, improving throughput for **5,000+** daily background checks.
- Delivered the "Remote Work Location" feature from **concept to production in <2 weeks** by translating vague requirements into technical specs, aligning with Product/QA/Leadership across modules, and reducing client setup time by **∼3 minutes per background check**.
- Boosted engineering velocity by building custom CLI tools for environment syncing and log-driven debugging, saving the team **dozens of engineering hours each week**.
- Maintained high code quality through regular **peer code reviews** and technical documentation, assisting with the onboarding of new developers and promoting engineering best practices.

Tyler Technologies **Dallas, TX**

Software Engineering Intern - UTDesign *August 2024 - December 2024*

- **Led a team of 5** in developing a full-stack Content Management System (CMS) for Tyler Technologies' internal newsletter, cutting publication time from **3 days to just 3 hours.**
- Developed an **MVC** application using Java JSP, **Spring Boot**, and PostgreSQL, streamlining publishing workflow.
- Collaborated with stakeholders to define **user stories** and create **Figma** designs, ensuring user needs and business goals.
- Assisted in integrating SQL Database with **Spring Data JPA**, optimizing content storage and retrieval for scalability and efficiency.

Dallas Formula Racing (FSAE Club) **Dallas, TX**

Software Engineering Club *August 2023 - May 2024*

- Conducted data analysis using **Pandas** and **NumPy** libraries, achieving **30%** increase in overall project efficiency.
- Designed, developed, and tested car suspension functions, incorporating data cleaning, enhancing accuracy by **23%.**
- Utilized **Plotly** to create visualizations from large datasets, providing insights into car performance.
- Collaborated in an **agile** team, participating in **weekly** scrum meetings, streamlining project coordination and delivery.

Projects

AI Research Assistant - RIDE **Dallas, TX**

UT Dallas *August 2024 - December 2024*

- Implemented a CNN for CIFAR-10 to analyze the trade-off between **activation sparsity** and **adversarial robustness**.
- Quantified a **16.3% accuracy drop** (74.1% to 57.8%) under adversarial noise, mapping the failure threshold where a **24% increase in sparsity** compromised model reliability.

Debt-A-Way (Project) *Jan 2024 – Jul 2024*

- Led a **3-person** agile team to build a peer-to-peer debt lending platform with **React**, achieving a **97%** Lighthouse score.
- Migrated from **MongoDB** to **PostgreSQL** via Prisma ORM, boosting reliability and scalability by **73%**.
- Implemented secure **JWT authentication** and a robust **Node.js/Express.js** backend for efficient CRUD operations.
