Education

The University of Texas at Dallas **Dallas, TX**

Bachelor of Science in Computer Science, GPA: 3.783 (Cum Laude) *May 2025*

Certifications: AWS Certified Solutions Architect, AWS Certified Cloud Practitioner, MCP Advanced Topics (Anthropic), Building With Claude API (Anthropic)

Technical Skills

Languages: Java, Python, C#, PHP, C++, JavaScript, HTML/CSS

Frameworks & Tools: React.js, Node.js, Express.js, Spring Boot, .NET, Git, Splunk, Docker, Visual Studio, Jira, Postman

Data: MySQL, PostgreSQL, Oracle SQL Developer, MongoDB, Prisma, Pandas, Plotly, Kafka

Cloud : AWS Lambda, AWS S3, API Gateway, CloudFront, CloudFormation, AWS SAM, EventBridge

AI / ML : RAG, MCP, Agentic Systems, LangChain, OpenAI API, Anthropic API

Experience

Hagerty **Dallas, TX**

Software Engineer (Cloud & Platform) *April 2026 - Present*

- Owned architecture and delivery for Node.js **serverless systems** supporting **$32M+ ARR across 150+** state and local government entities as the **sole full-time engineer** on the onboarding project.
- **Modernized** legacy onboarding application, migrating undocumented standalone Lambdas into standardized production framework using **AWS SAM IaC under 4 weeks**.
- Cut execution time by **44s per run** by consolidating **20+ fragmented services to 11 optimized functions**, eliminating a legacy "Lambda Pinball" monolith via a **shared Lambda Layer** with **in-memory caching**.
- Orchestrated complex **multi-step vendor** workflows (Microsoft, Upland, Jitbit) using **AWS Step Functions** and **Event Bridge** with parallel execution and failure handling, slashing onboard runtime from **5 to 2 mins**.
- Engineered a **zero-trust CI/CD pipeline** via GitHub Actions and AWS SAM, utilizing Jest suite covering **150+** unit and integration test paths with **85.14%** test coverage to achieve strict environment parity (Dev/Staging/Prod).
- Partnered with **executive leadership** to architect a secure serverless SFTP solution for **New York City Emergency Management**, building an **AWS prototype** to eliminate critical security vulnerabilities.

Paycom **Dallas, TX**

Software Developer *June 2025 - February 2026*

- Developed full-stack features for **$40M+** background check and WOTC platforms serving **small businesses to F500** clients, resolving production incidents within **12-hour SLAs** across **sharded MySQL**.
- Enhanced REST APIs for **event-driven** PHP MVC monolith with React SPA improving reliability and security.
- Reduced worst-case latency by **90% (29s to 3s)** by eliminating N+1 queries, refactoring XML, and implementing caching resulting in improved throughput for handling **5,000+ daily webhook** requests.
- Delivered "Remote Work Location" feature from **concept to production in under 2 weeks**, reducing client setup time by **3 minutes per background check**.
- Developed custom CLI tools for environment syncing & debugging, saving **dozens of engineering hours weekly**.

Tyler Technologies **Dallas, TX**

Software Engineering Intern - UTDesign *August 2024 - December 2024*

- **Led a team of 5** to build full-stack **CMS**, cutting newsletter publication time from **3 days to 3 hours**.
- Built **Java Spring Boot MVC** application with PostgreSQL (Spring Data JPA) streamlining content workflow.

Projects

AI-Powered SDR Lead Generation System *March 2026*

- Built a **RAG-based agentic system** (Node.js, LangChain, MCP) with HITL authorization, automating real-time prospect research and direct email execution to reduce daily SDR workload from **2 hours to seconds**.
- Designed and implemented a **custom MCP server** with **Google Serper API tool** integration to fetch up-to-date company news, powering context-aware outreach via **OpenAI and Anthropic APIs** through **LangChain**.
- Deployed application serverless on AWS using SAM, **API Gateway**, and Lambda, with React frontend served via **S3 and CloudFront.**

AI Research Assistant - RIDE *August 2024 - December 2024*

- Implemented CNN on CIFAR-10 analyzing **activation sparsity vs adversarial robustness**, quantified **16.3% accuracy drop** under noise (Sparsity Turns Adversarial: Energy and Latency Attacks on Deep Neural Networks).
